Fiber Laser Software Settings and Defaults

The settings can be accessed by clicking the icon with the wrenches:

These settings control how your workspace is displayed on the screen.

Size, both Width and Height, should match the lens being used. 70x70 or 100x100 are the options available.
To adjust Font settings, click here:

This sets the default Font information for this system. You may change these to user preferences, but it is fine to accept these defaults. Note that Centered font makes it easier to align lettering.
The default Hatch settings should match these:

To adjust hatch settings, click here:

You may choose to select “Follow edge once” if you wish the hatch area to be outlined. Otherwise, accept the defaults.
This is where one configures the software to match the lens.

Field size should match the size entered in workspace screen, either 70 or 100

Scale should match lens as well

This defaults to the proper (fiber) setting, so no changes are needed.
Accept defaults on this screen.
