

The lesson will be used to create a nametag for scrapbookers. Besides the basics shapes and text, the contour and the weld are the main CorelDRAW features used.

Create a rectangle 3" x 1.5", and round the corners to a roundness of 20. Place the artwork as shown on the rectangle.

Select the outline of the crown and create a single contour to the outside .007.

Select the new contour. Arrange | Break Contour Group Apart. Select the nametag outline and Weld it to the contour of the crown. Add the lettering, and the 1/8" holes that will be cut out for the stones. I have filled the cut-outs to simulate the stones. The font is BibleScrT.
